[Best practices for REST API]

① HTTP → type of request
   → (Codes) → v. Important

② Designing Routes properly

③ Do not return plain text
   → Specify "Content-type" header

④ Don't use verbs in Route
   Eg → /books/:slug/(Generate Book Cover)
                                    ↓
                                   verb

   Bad design
       ‖
   GET /books/:slug/bookCover

⑤ Query param → for pagination or filtering
